Market Commentary

After some decent recovery from the March lows, domestic investment assets paused in August, with most headline indices largely unchanged for the month. Bonds marginally outperformed equities in aggregate, but financials were the biggest disappointment, led lower by banks, life assurance and property shares. Offshore investments continued their outperforming trend, despite a strengthening bias for the rand, as US equities, and tech stocks in particular (e.g. Nasdaq), continued to power ahead. China led the way for emerging markets, although they have yet to catch up to their US counterparts. On the domestic front, economic growth remains on the back foot (the next three months will be critical for the SA recovery, as UIF funding reduces and the extra grant payments come to an end next month), and with inflation expectations still largely under control, it does provide scope for the SARB to cut interest rates one more time at one of the remaining MPC meetings in 2020. The inflation outlook is supported by a lack of demand in the economy, and with the US dollar at two-year lows, it supports a stronger relative picture for the rand against the dollar, as opposed to other currencies.

Portfolio Investment Returns compared to Market Performance

(%)	6m	1yr	3yrs (pa)	5yrs (pa)	10yrs (pa)
Cash - ST Fixed Income Index (STeFI)	2.8	6.3	6.8	7.0	6.4

Historical Performance

Portfolio description

The objective of the **etfSA Wealth Enhancer Portfolio** is to offer above-average returns to members with a long-term investment horizon (at least 10 years) and a high tolerance for risk (short term volatility), by following a pro-active allocation to passively managed portfolio building blocks (ETPs) which are expected to offer good investment value in the medium term.

The fund is ideal for investors who are self-employed or already contributing to an employer's retirement fund and would like to make additional savings for retirement.

The portfolio is suitable for an investor with a long-term investment horizon – it is designed to provide maximum growth in capital with a high targeted real return. The portfolio is well-suited for risk-tolerant investors with real return objectives, seeking long term wealth creation, who in terms of their liabilities, must earn investment returns more than inflation.

Although the portfolio aims to add an element of protection to invested capital, it does not offer capital or performance guarantees, therefore and portfolio value fluctuations may occur in the short term. Intra-period (between rebalancing) the effective asset class weights can drift around the optimised strategic asset allocation levels, within pre-defined tolerance limits.

Notes:

1. The performance of the **Model Portfolio** represents the theoretical performance of the optimised strategic asset allocation without the impact of actual investment cash flows. The performance of the **etfSA Wealth Enhancer Portfolio** represents the performance of the actual portfolio, including all investment flows, since inception.
2. All returns quoted are net of fees – that is, after deduction of all expenses as quoted in the Portfolio Management TER. Returns for periods exceeding one year are annualised. All returns are in Rands.
3. The benchmark is a composite benchmark as per the weights and indices as indicated on the first page. The return is an estimate and is displayed as a general guide which is subject to change without notice to investors.
4. All holdings information is based on latest available data. There may be differences in totals due to rounding.
