Disclaimer
Any opinions/analysis/data contained herein are for informational purposes only and should not be considered advice (including but not limited to, financial, legal or tax) or a recommendation to invest in any security. We do not assume liability for loss arising from errors in, or from relying on, the information contained herein, irrespective of whether there has been any negligence by us, our affiliates, officers or employees, (whether direct, indirect, consequential or inconsequential). Market and economic conditions are subject to rapid change. Any comments, opinions and analysis are rendered as of the date of publishing and may change without notice. Such changes may have a material impact on the outcome of financial instruments and may not be suitable for all investors. Past performance is not indicative of future performances. Securities involve a degree of risk and are volatile instruments. FNB Stockbroking Portfolio and Management and its affiliates disclaim and assume no liability for any loss or damage (direct, indirect, consequential or inconsequential) that may be suffered from using or relying on the information contained herein without seeking professional advice. Opinions/analysis/data which we provide to you may contain both long term and short term buy or sell ideas. It is your obligation to ensure that any ideas you choose to follow are in line with your short or long-term trading strategy and objectives. Performance numbers are based on a model portfolio or a composite of client portfolios. Hedge funds and CPI performance numbers lag by one month. Performance is calculated net of a portfolio management fee. Varying market conditions, timing of portfolio changes and the level of client discretion may result in some variance between actual and model portfolio performance. Performance is calculated using the IRR method. The timing of large cashflows could potentially have an impact on the performance.

Introduction

The Wealth Segregated Solution Portfolios have been specially designed to offer investors superior investment products, with exposure to inflation-beating returns over different time horizons. Each portfolio has been designed to optimise returns over a specified time horizon. Investors benefit from a segregated portfolio that offers value for money - managed by the brand that you trust.

Risk objective

The objective of the portfolio is to deliver long-term capital appreciation with relatively low levels of volatility in an equity context. The portfolio will be diversified from both a regional perspective and industry (sector) point of view. Dividends will be reinvested into the portfolio.

Investments objectives

The Global Select ETN aims to achieve long-term capital growth over the economic cycle by selecting leading companies globally that benefit from sustainably growing total return profiles supported by best-in-class management and solid balance sheets. We focus on a concentrated selection of quality mega-caps featuring leading industry positions that, in turn, enable the respective companies to take advantage of volatility in economic activity over time and offer a conservative way to participate in equity market returns.

Investment strategy

The Portfolio adopts a long-term investment approach, focusing on a selection of "world class" Mega-caps which, over time, aim to deliver sustainable above average returns. Particular focus is given to "quality", compounding stocks which are characterised by their ability to generate sustainably growing excess cash returns over their equity's cost of capital, part of which is expected to be returned to shareholders. Other quality characteristics include management and balance sheet features, as well as a relatively predictable earnings profile.
